# KENWOOD IRIS GARDENS

Modern  
Hemerocallis  
(Daylilies)

1954

Mrs. J. F. Emigholz  
SYcamore 7496

## FOREWORD

The past year has again shown the ability of daylilies to thrive under adverse conditions. Icy rain came when the narcissus were in full bloom, and everything was coated with a glassy covering. Later, hot and dry weather, and no rain from the beginning of August until early in November, Perennials in the fields suffered, even with applied water, but the daylilies showed little bad effects beyond no fall bloom. They are the supreme perennial.

Many have written, expressing their satisfaction at the quality of the plants received, and their pleasure in our introductions. It is not possible to write to all, but we wish to thank you for your friendly letters. We have always strived to send quality plants.

Varieties showing green foliage in winter, are marked EV. This should be of value to Southern growers, although many varieties that are dormant here, have remained green in the South. The time of bloom given is for our locality. In the North and East they start about a week or two later. Several kinds often bloom again in the fall, and are marked "RE" before the price.

**CULTURE:** The plants bloom best in a sunny location, but will take shade for half a day. They need moisture before and during the blooming period to produce larger and finer blooms. But they bloom well even in dry Mid-West. Allow 2 feet between plants in normal growth. summers, which accounts for their popularity in the Re-set and divide in early spring, or after their blooming season in August until late September. Large established plants produce the best bloom, should have more room, and need to be re-set only occasionally. In planting, place the crown a little below the surface, spread out the roots. Old or dried manure and compost, with a bonemeal added, induces a good root growth. Avoid chemical fertilizers or those high in nitrogen, as it produces a heavy growth, and the color of the flower is not normal.

**FRAGRANCE:** All evening bloomers and the lighter yellows (00-5) are fragrant. Also nearly all in the yellow and orange shades. Pink, red and bicolor varieties do not seem to have it, or only in a limited amount.

**COLOR LISTING:** Varieties are placed in color groups. Few people have color charts, and do not know the depth of the color from descriptions. Yellow comes in many shades, some greenish as barium and citron yellow, or lemon in color. Then there are the pure yellows and some are gold or orange in coloring. As the old Betscher hybrids are well known, and have wide range in the yellow and orange shades, they were used as a basis for depth of color and begin with "1". Flowers lighter in color are marked "0" or "00" for a paler shade. Other varieties having the same color number

may be entirely different in form, size of flower, or height. The numbers are used only to help you select different shades in the yellow color range. Pink, red shades and color patterns are marked L, M or D before the name, indicating whether they are **light**, **medium** or **dark** in general coloring. Advise if this method is helpful to you.

**TRANSPORTATION:** Strong, single divisions are sent postpaid. Local orders can be dug anytime, if the weather allows, but those for shipping are sent in early spring until mid-May, and after the blooming season until October. Those listed for fall delivery are sent after the middle of August. Due to the increase in postal rates, it is necessary to put the minimum charge at 50c. No orders are accepted under \$2.00. For orders under \$3.00 add 25c for postage and packing. Add 20c extra for special handling. **Ohio** purchasers please add **sales tax**.

**SEEDLINGS:** Each year new varieties are developed, showing improvements in form and color. Of these, only a few are set aside for further testing. Do you want a thrill? Then try some, all will bloom this year. You will receive colors that are not possible in named varieties offered at the same price. Only sent **after** blooming season.

**FINE MIXTURE:** Includes all colors in balanced mixture, 8 for \$2.50 postpaid; 20 for \$5.00; 50 for \$10.00, express collect.

**ARISTOCRAT SERIES:** An extra fine selection, labeled as to color. Six different for \$3.00; or twelve different for \$5.50, postpaid.

### INTRODUCTIONS

These seedlings have been carefully selected as being distinct and better than known named varieties. Two descriptions are given for these varieties. The colors are taken from Ridgeway's chart for the first description, and are intended for those who want exact colors. The second one gives the general color most people would see in the flower. All pale yellows introduced are distinct in form and growth.
